

FREE ACCESS FLUXNET DATA

Fair use data policy

The data available in this database (a subset of the LaThuile dataset) have been furnished by individual scientists who encourage their use under an open data policy that emphasizes the free and open exchange of scientific information.

The data are made freely available to the public and the scientific community in the belief that their wide dissemination will lead to greater understanding and new scientific insights and that global scientific problems require international cooperation.

Open-access means that data are freely-distributed without charge; there may be charges for the cost of reproduction and delivery when access is not web-based. Data download is unrestricted and requires only a free registration needed for web security reasons.

The FLUXNET participants that decided to share these data openly rely on the ethics and integrity of the users to assure that the data providers and FLUXNET receive fair credit for their work through inclusion of the text provided below in the acknowledgment.

The data users must send accepted papers or links to them to the fluxdata.org staff and PIs of the sites used in the paper. It is also recommended to contact the site PIs prior to publication to prevent potential misuse or misinterpretation of the data; if the work is based on only a few sites, this contact is strongly recommended.

Downloaded data cannot be redistributed to others and must not be redistributed via other websites, databases or any other storage system to prevent circulation of different versions of the datasets.

Acknowledgment text:

This work used eddy covariance data acquired by the FLUXNET community and in particular by the following networks: AmeriFlux (U.S. Department of Energy, Biological and Environmental Research, Terrestrial Carbon Program (DE-FG02-04ER63917 and DE-FG02-04ER63911)), AfriFlux, AsiaFlux, CarboAfrica, CarboEuropeIP, CarboItaly, CarboMont, ChinaFlux, Fluxnet-Canada (supported by CFCAS, NSERC, BIOCAP, Environment Canada, and NRCan), GreenGrass, KoFlux, LBA, NECC, OzFlux, TCOS-Siberia, USCCC. We acknowledge the financial support to the eddy covariance data harmonization provided by CarboEuropeIP, FAO-GTOS-TCO, iLEAPS, Max Planck Institute for Biogeochemistry, National Science Foundation, University of Tuscia, Université Laval and Environment Canada and US Department of Energy and the database development and technical support from Berkeley Water Center, Lawrence Berkeley National Laboratory, Microsoft Research eScience, Oak Ridge National Laboratory, University of California - Berkeley, University of Virginia.
